

Cockroach (Baiting) Treatment Prep

Local Pest Control will be treating your residence so as to control Cockroaches.

The technician will require you to prepare your suite as follows:

1. Cleanliness is key to cockroach control. Cockroaches need food items to survive, so please clean any dirty dishes, pet food bowls, open dried food containers and packages and vacuum regularly to prevent cockroaches.
2. Please clean any food stuffs/grease crumbs etc. Any un-kept food/living spaces which would harbor cockroaches will be noted and submitted to building manager.
3. Remove any items from kitchen and/or bathroom cabinets. Please take out garbage/recycling bins, cleaning products etc. If you have built in drawers in lower kitchen cabinets, please remove the entire draw and place them on the living room floor...anywhere away from the kitchen is fine.
4. We will need to access around the fridge and stove areas, so please remove any items/bags/boxes around these areas
5. In general, the better access we have to where you are seeing cockroaches, the better we can treat. The more uncluttered living spaces the better.

After Care Protocol:

1. When the technician is finished baiting your suite you may put the items you have moved back to where they were.
2. Please do not wipe or mop the floors or cupboard areas that we have treated. If needed, please put down newspaper over the top of the bait, but do not use a wet towel or mop to clean as you will simply be removing the bait that's going to kill the cockroaches.
3. If you have any questions before or after the treatment, please don't hesitate to call us

We will be using the following insecticide: Avert Dry CR Bait: Active Ingredient : Abamectin - .050 % PCP #28403
Greenway : Active Ingredient: Disoedium Octaborate Tetrahydrate - 6.0 % PCP 24175

Your technicians name is: _____

Sincerely,

Local Pest Control
