

Cockroach (Spray) Treatment Prep Sheet

Local Pest Control will be treating your residence so as to control Cockroaches.

The technician will require you to prepare your suite as follows:

- Remove any items from kitchen and/or bathroom cabinets
- We will need to access around the fridge and stove areas, so please remove any items/bags/boxes around these areas. For a spraying treatment, you will need to remove or unclutter any areas you have seen cock-roaches in. The more clear access we have to all areas, the better we can treat.
- When you re-enter your suite you may put the items you have moved back to where they were. Please do not wipe or mop the floors or cupboard areas that we have treated. You may vacuum but do not use a wet towel or mop
- If you have any questions before treatment starts, please don't hesitate to call us
- Cockroaches need food items to survive, so please clean any dirty dishes, pet food bowls, open dried food containers and packages and vacuum regularly to prevent cockroaches.
- For spraying treatment, tenants must vacant the home for a minimum of 6 hours.

We will be using the following insecticide:

Maxforce Roach: Active Ingredient: Hydramethylnon – 2.15 % PCP #24240

Dragnet: Active Ingredient: Permethrin-0.5% PCP 24175
